Forms and Grid

I created a interactive contact form for my portfolio and noticed how recent trends in digital experience design influence this process. It's essential to apply modern design principles to ensure the form is user-friendly, efficient, and secure. While exploring digital experience design, I saw how online forms are changing with new trends. Their convenience and efficiency make them more popular than traditional paper forms. People prefer them because they are easy to use and allow for quick information processing, making them a key trend in data collection and user engagement.

Finished version:

**Here is screenshot of me watching a tutorial how to create forms:**

Grid:

Research on Design Trends: Choosing Grid Layout In the past years, I started to see grid layout more often on the websites. To align with modern standards, I conducted research that highlights its popularity. I found several valuable resources on grid design, including: CSS-Tricks: Their comprehensive guide on CSS Grid Layout offers detailed examples and techniques for creating responsive layouts.

Before:

This is the first version of the grid layout that I created on my portfolio website.

After:

In this version I applied what I learned about the grid layout and adjusted information about each project that I'm working on this semester. I also adjusted the learning outcomes.
